

## RUG CARE & MAINTENANCE

- A rug pad is recommended to prevent slipping and to extend the life of your rug.

- Vacuum rugs regularly.

Set the vacuum height gauge to its highest setting, as some powerful vacuums may damage the pile or bound edges of your rug.

- Vacuum shag rugs with a straight suction vacuum. Never use a beater bar on a shag rug.

- Do not pull loose yarns. Trim with scissors.

- It is normal for new rugs to shed fibers, especially wool rugs and hand tufted rugs.

Frequent vacuuming will aid

in eliminating excess loose fibers.

The shedding will subside and stop with regular wear.

- Blot spills immediately by pressing firmly with clean, dry, white paper or cloth towels, working from the outside of the spill inward to avoid spreading. Continue blotting until no more moisture transfers to the towel.

- HOST Dry Carpet Cleaner* is recommended for cleaning.
