

# botanist<sup>TM</sup>

Socially responsible modern products

Botanist strives to tackle problems far beyond the challenges of traditional design dilemmas. Problems like cancer, education, AIDS, and the deterioration of the environment. It aims to do this through global collaboration, eco-manufacturing, and smart business.

Launched in 2008 by Orange22, Botanist products begin life as a blank-canvas made from recycled aluminum. Leveraging just-in-time manufacturing and hydro-jet technology these blank-canvas take on the unique vision of their collaborating designer. In true companionship, Orange22 matches each designers royalty to a social cause or charity of their choice. The end result is not only a fabulous looking line of modern products, but a ground breaking initiative, that empowers the design community to make a difference.

**collaborate, create, and give back**

iconic form  
indoor/outdoor powder coat

The Flow series starts with a minimalist aluminum form followed by an oven baked powder coat that is highly durable and UV stable. Flow feels at home indoors and out.

### happy indoors and out

The Flow, Flora, and Designer series are ready for outdoor use; they employ an industrial grade powder coating on the aluminum structure, which naturally resists corrosion. The optional bench pad is made from marine grade vinyl and can withstand the sun and rain with ease

### nesting end tables

Our end tables are made to nest over the cocktail table, combining to create a layered look that highlights the complimentary surfaces and materials. A small storage area is created that can be used to conceal magazines, remotes, and incidentals.

### mix & match

Having a hard time choosing which finish is best for you? No problem. Mix and match different materials and colors to create a set that is perfect for your environment. For the designer series, you can mix an end table from one designer, with the cocktail table of another.

### modern environment

Need a perfect place for your entertainment in mind? The bench can be used to hold your Plasma TV and audio/visual equipment without the bulk to accommodate older technology. The structural brace has holes that can be used for cable management to keep pesky wires off the floor.

### sleek and subtle

The sleek forms and intricate details of the botanist series communicate a sophistication of design and space. At home in a modern setting, as well as in the outdoors, the botanist pieces elevate the character of their surroundings.

### contract ready

Botanist pieces feature the durability, quality, and style that you expect from contract grade furniture.

### tough powder coat

Our powder coating is tougher than any paint. The process applies plastic resin particles to each piece, which is then baked in an oven, creating a durable layer of plastic on the surface. The colors are UV and weather resistant intended to be used outdoors. It's the toughest stuff that we could find, and we think it looks great too.

### want to try your own graphic?

We are happy to apply your designs, including logos, patterns, and type, to our Botanist pieces. We can work with your designers to develop a product that fits your project. (Minimum order and setup fees apply).

### want a custom color?

We use the TIGER Drylac® Series 38 coating system, and can create custom Botanist pieces using any of their available colors. Contact us to receive a color specification chart (Minimum order and setup fees apply)

### add on security feet

Want to use these pieces in a public space? Our available surface mount security feet securely anchor these to the ground.

### add on bench pad

Worried about a hot seat outdoors? Our available bench pads are not only soft enough to keep you comfortable, but they also are made to stand up to the weather. We offer them in marine grade vinyl, or in a durable Sunbrella Material, all made to withstand the rigors of outdoor use.

### worried about water & rust?

Don't be. All Botanist pieces are made from aluminum alloy that is highly corrosion resistant and powder-coated for extreme durability. They are happy to live in a damp environment and look great in a garden or around the pool.

materials	Marine grade vinyl   Sunbrella
dimensions	44 x 18 x 1 in

### naturally beautiful

The Botanist Natural series is available in a wide range of woods, from dramatic ebony to the lightest maple. The engineered, eco-friendly veneer gives the character and warmth of wood in an impossibly thin form.

### our veneers

We use engineered veneers which are grown in a controlled poplar forest and dyed to look like exotics. The finished veneer is still real wood but this process keeps the exotics in the forest where they belong.

### powder-coating

TIGER Drylac® Powder Coatings are solvent-free and comprised of various synthetic resins, pigments and special additives for a high quality surface finish. Economic and ecological powder coatings represent the future of paint technology.

### our factory

Our 215,000 square foot facility and distribution center is located in Santa Ana, CA. The 17,000 sf state-of-the-art coating facility has been in operation for over 32 years and is completely self contained and ISO 9002 certified.

### impossibly thin

The thin profile cleverly conceals the true strength and durability of each Botanist piece.

### water-jet

Water is expelled from a small nozzle at a high velocity to create intricate designs in the aluminum. There is no heat involved in the process so the material maintains its integrity.

### worried about strength?

Each piece is formed from a quarter-inch aluminum alloy sheet, making it durable, yet lighter than you might expect. In addition, the cocktail table and bench are reinforced further with a structural brace that is welded in place. Even the cocktail table can be used as occasional seating during an outdoor soiree or a loft party.

### our boxes

Our cardboard is a blend of 40% to 80% recycled materials. Additionally we designed our boxes to ensure damage-free delivery and ease of handling by including cutout handholds.
