

ABOUT URBIA'S HANDMADE CONCRETE PRODUCTS

Concrete Mixx products by Urbia are composed of natural materials: granite stone powder, Portland cement, natural jute fibers and water. Urbia finishes its concrete with a water-based acrylic surface sealer, which provides a protective barrier in both interior and exterior environments. Our UV resistant sealer is non-yellowing and protects against water and chloride intrusion while permitting moisture in the concrete to escape.

VARIATION

Our Mixx Collection concrete pieces are handmade from natural materials, and as such, exhibit color and veining variations by batch and individual item. Unique markings, variation in color, small hairline cracks & imperfections are normal and to be expected. No two pieces are exactly alike, which gives each piece its own unique character and charm!

PROTECT AND PREVENT DO'S + DON'Ts

- Do wipe up spills quickly to avoid staining. Clean with water and a mild soap.
- Do apply a paraffin-based wax sealer 3-4 times per year to protect against stains. (ie. Johnson's Floor Wax).
- Do bring in your product during freezing temperatures or use a waterproof cover.

- Do not use bleach-based, citrus-based natural cleaners or ammoniated cleaners on concrete.
- Do not allow oil, grease or acid-based liquids to sit on product surface.
- Do not place hot objects directly on concrete.
- Do not allow water, snow or ice to build up on surface of product.
