

Winston[®]

CATALOG

A sepia-toned photograph of a large, two-story house with a swimming pool and patio furniture. The house features a balcony with a railing and several windows. In the foreground, there is a swimming pool with a stone deck. A patio set with a table and chairs is arranged on the deck. The text "Since 1975" is overlaid in the center of the image.

Since 1975

Oyster Weave

Having the look and feel of real rattan, this proprietary weave creation was the result of dedicated time and effort. The material itself is a mix of polyethylene and UV inhibitors with no acrylic additives. Both the texture and coloration are achieved from the hands of an extrusion artist who intuitively adds the correct amount of pigment to the weave during precise temperature intervals in the production process. The weave coloration is infused throughout the core of the weave. The result is a beautiful, natural weathered weave material. All pieces of Banyan Bay are hand woven, strand by strand, by highly skilled artists. One chair can take more than a day to weave.

- 1) Traditional design
- 2) All extruded frame
- 3) Multi-dimensional extrusion
- 4) Cushions can be ordered with a coordinating button and welt fabric
- 5) Nylon foot glides protect furniture and floor surface
- 6) Vinyl Strap cushion seat substructure
- 7) Available in all all finishes

Oyster Weave

Having the look and feel of real rattan, this proprietary weave creation was the result of dedicated time and effort. The material itself is a mix of polyethylene and UV inhibitors with no acrylic additives. Both the texture and coloration are achieved from the hands of an extrusion artist who intuitively adds the correct amount of pigment to the weave during precise temperature intervals in the production process. The weave coloration is infused throughout the core of the weave. The result is a beautiful, natural weathered weave material. All pieces of Banyan Bay are hand woven, strand by strand, by highly skilled artists. One chair can take more than a day to weave.

- 1) Contemporary design
- 2) Modular aspect allows configurations for any setting
- 3) Furniture components held together with two nylon clips
- 4) Nylon clips keep furniture from moving front/back and side/side
- 5) Frame created from extruded aluminum
- 6) Cushions lock into frame without the need of ties
- 7) Available in all finishes
- 8) Table tops are stamped aluminum

Banyan Bay can be ordered with only solid or textured fabrics. Patterned fabrics such as stripes and prints are not available on modular collections.

Fire Pits

M8048-PIT 48" Round Fire Pit (wood burning)
Available in all all finishes.

Each fire pit includes a spark screen, stoker/grate lift wand and wood grate.

Two finger holes are provided for easy lifting and placing the cover in position.

When the fire pit is being used, the cover stores underneath.

M8448-PIT 48" Square Fire Pit (wood burning)
Available in all finishes only.

Frame Finishes

What makes Winston's frame finishes so durable and long-lasting has more to do with what we do to prepare the frames than the end results. A superior finish begins with the preparation of the surface area. It begins with cleaning the aluminum frames. The "Primer System" Winston utilizes is a 7-step process that takes approximately 45 minutes to complete per frame.

First, each frame receives an alkaline bath that degreases and etches the frame. Two clean water rinses follow to remove the alkaline residue as well any etched particles. Next a chrome phosphate conversion coating is applied that seals the frame and prevents the formation of corrosion. This step is followed by two additional clean water rinses in preparation for the final stage. During the final stage each frame is "deionized" which removes any mineral deposits that might be left from any of the prior stages. This step also provides a greater bonding surface of the aluminum for optimal adhesion of the powder paint. Winston's paint finishes begin as a very fine, electrostatic polyester powder that is sprayed onto the frame. The powder is "charged" so that the powder attaches to the frame much like metal to a magnet. This provides complete and even coverage of the powder. Once covered with the powder, the frames enter a large oven area whereby the frames are heated to a very high temperature which melts the powder. The oven process takes approximately 30 minutes to complete resulting in a durable, baked on finish.
